### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 2, 39 and 40, the prior art of record fails to teach that the first control unit does not use the first and second transmission paths to detect the fault condition in the communication bus, in combination with the other limitations in the claims.

Regarding claims 3-9, 11, 12, 14, 15, 41 and 42, the prior art of record fails to teach a third transmission path between the first and second ends coupled to the safety device, wherein the first control unit is configured to detect the fault condition on the third transmission path and to cause the first switch unit to move to the open position to interrupt the flow of electrical signals between the first and second ends along each of the first and second transmission paths in response to detecting the fault condition on the third transmission path at the first control unit, in combination with the other limitations in the claims.

Regarding claims 16-24, 26-30 and 43, the prior art of record fails to teach a third transmission path disposed between and communicatively connecting the first end and the second end, a first control unit coupled to the third transmission path to detect a fault condition on the third transmission path associated with the communication bus, wherein the first control unit causes the first switch unit to move to the open position to interrupt the flow of electrical signals along the first and second transmission paths between the first end and the second end in response to detecting the fault condition

associated with the communication bus on the third transmission path at the first control unit, in combination with the other limitations in the claims.

Regarding claims 31-37, the prior art of record fails to teach interrupting the flow of electrical signals along the first and second transmission paths at a point between the first and the second end of the communication bus in response to detecting a fault condition associated with the communication bus on the third transmission path, in combination with the other limitations in the claims.

Regarding claim 38, the prior art of record fails to teach the prior art of record fails to teach a third transmission path and a fourth transmission path connected in a loop within the communication bus, wherein the safety device is coupled to each of the third and fourth transmission paths and wherein the control unit includes a signal source to send a generated signal through the third transmission path and receives a received signal on the fourth transmission path and detects a fault condition based on the received signal, in combination with the other limitations in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
